Schistosoma japonicum is a threat to our peasant bodythe most serious parasitic disease in health.is sucked by Japanese blood.worm intointo body,and parasitic on the portal vein system.causesonespecies Chishengfrom.Human infection in Japanese schistosomiasis is mainly in contact with the skin of Schistosoma japonicum thetail of the water has a direct Relationship. Infected with Japanese blood.The main lesions of the disease were imprinted by the worm in the liver andinthe colon, and the granuloma. ,IProThe beds are acuteperiod.slowand late. The main manifestation of acute phase isfever. Allergy Skin should, abdominal symptom; chronic period with Liver and spleen enlargement mainly; Late major lesions are portal vein Peripheral fibrosis. The final can be left for portal hypertension syndrome, splenomegaly and liver cirrhosis ascites. Advanced schistosomiasis

(withlateblood) patients with cirrhosis of ascites undergo a pairofFade After treatment. However, it is often easy tosend. CausesThe severity of the patient to worsen. , My center uses long interrupted Treatment of late-stage blood suction with small doses of furosemide and endoscopic therapy disease of cirrhotic ascites after regression patient. Found liversclerosing ascites recurrence rateMingnexttwo

yearslyearinsideascites recurrence Analysis.Seetable3.,
To ask the
Ascites is formed by a combination of factors which causes the water to remain in the abdominal cavity of the main reason is portal high pressure. The internal dirty blood vessel dilation causes the effective blood volume matrix to be the main factor that causes water retention and ascites formation and aggravation. Results which causes the water to remain in the abdominal cavity of the patient's body was found to be delivered to the kidneys by the rate of the distal end of the tubulesclearshow decrease. This indicates that the system of equal electrolytes in the renal small tube near the heavy absorbance increase and kidney small distal tube WJ significant The decrease is caused by free water in the patient's body. If the patient does not have a combined ascites. Kidney Small Small do Kidney if diuretic therapy. Results: each
